ABSTRACT

Average salary increases for 3,083 faculty in the field of business economics are reported for 1984-1985 and 1987-1988, as part of the College and University Personnel Association's annual faculty salary studies. Included are comparative data for 160,596 faculty at 216 public colleges and 266 private colleges, representing 45 academic disciplines. In 1984, 107 public colleges and 134 private colleges reported on business economics faculty salaries, while 120 public and 142 private colleges reported in 1987. In 1987-88, average faculty salaries in this field were approximately 8% and 4% above the overall average faculty salaries of the other 44 disciplines/major fields for both public and private colleges, respectively. The average salary for the field in the public colleges was greater than in the private colleges in 1984-85. In 1987-88, the overall salary factor in the public colleges was 8% higher than the overall average in comparison to that of the private colleges, 1.08 vs. 1.04, respectively. Included is information on: the number of faculty by academic rank, including new assistant professors; salaries by academic rank; the ratio of average salaries to total salaries of all institutions in both years; comparisons with the Consumer Price Index of changes in cost-of-living for both years; and comparisons with 44 other disciplines. The disciplines and participating institutions are listed. (KM)

ED302135

Since 1982-83 the College and University Personnel Association (CUPA) in Washington, D.C., in cooperation with Appalachian State University in Boone, North Carolina, has conducted annual national faculty salary studies by discipline and rank each year through 1987-88. Each year two separate studies are conducted, one for public senior colleges and universities which are members of the American Association of State Colleges and Universities (AASCU) in Washington, D.C., and the other for private senior colleges and universities. The list of private institutions is provided by the American Council on Education in Washington, D.C.

Salary data for each study were collected and tabulated for full-time teaching faculty in 45 selected academic disciplines including business economics. The disciplines were chosen from among those defined by the Higher Education General Information Study (HEGIS) Taxonomy and by A Classification of Instructional Programs (CIP), 1981. The definition of the discipline/major field of business economics in the CIP is as follows:

> An instructional program that describes the principles and methods for organizing a business firm and for combining resources to produce goods and services, taking account of costs, profits and the nature and extent of competition in markets.*
>
> [*Gerald S. Malitz, A Classification of Instructional Programs (Washington, D.C.: National Center for Education Statistics, [1981], p. 49.--06.0501]

This article presents a summary of the overall average salary increases in the discipline/major field of business economics from the "baseline year" of 1984-85 to and including the "trend year" of 1987-88 for both public and

HE 022 040

private institutions. Of the 272 institutions which participated in CUPA's PUBLIC (AASCU) study of 1984-85, 216 also participated in 1987-88. Data from those same 216 institutions were used in both the baseline year and the trend year. Of the 451 institutions which participated in CUPA'S PRIVATE study of 1984-85, 266 also participated in 1987-88. Data from those same 266 institutions were used in both the baseline year and the trend year.

This study lists the average salaries of business economics faculty for both public and private participating institutions by rank including "new assistant professors," the faculty mix percentage (FAC MIX PCT) and the salary factor. In addition, comparisons are made with the CPI (Consumer Price Index) of changes in cost-of-living between the two studies for each of the two study years (1984-85 and 1987-88).

The CPI is based on prices of food, clothing, shelter and fuels, transportation, medical care, entertainment, and other goods and services that people buy for day-to-day living. In examining trends in faculty salary it is important to consider any changes in the economy. Therefore, the CPI was used to yield a more precise representation of "real" salary increases over time.

The salary is based on a nine- or ten-month academic year salary of full-time faculty only. It does not include any faculty members teaching less than 51 percent. Salary for summer academic work, fringe benefits, and perquisites are not included in the salary data. The average salary is based on the study information with the assumption that all employees were full-time. The average salary displayed is an average of all faculty salaries reported for a given rank and discipline.

The "NUM" means the number of faculty members whose salaries were included to compute the average salary.

The "N/IN" means the number of institutions that reported salary data for a given academic rank and discipline/major field.

The FAC MIX PCT is the percentage of faculty in a given discipline/major field who hold a given academic rank. For example, a FAC MIX PCT factor of .32 for associate professor of business economics in the 1984-85 public study means that 32 percent of the faculty in that discipline/major field hold the rank of associate professor.

The SALARY FACTOR for a given rank of a given discipline/major field is the ratio of the average salary to the total average salary of all institutions in each of the four studies: PUBLIC 1984-85, PUBLIC 1987-88, PRIVATE 1984-85 and PRIVATE 1987-88. For example, a SALARY FACTOR of 1.07 for assistant professors in the discipline/major field of business economics in the 1984-85 public study means that their salaries are 7 percent higher than the average of all assistant professors in all institutions in that study.

NEW ASST PROF is the grouping of assistant professors who were hired for the first time in the fall of the study year (1984-85 or 1987-88). All information for this group was included in the ASST PROF group for reporting purposes. This group is used mainly for new hiring information.

ALL MAJOR FIELDS is the entire data base for all 45 disciplines/major fields in each of the four studies. It is used to compare, among other things, the discipline/major field of business economics with the entire data base for each study.

Of particular import to the reader is noting the size of the sample on which each percentage or dollar value is based. The smaller the number in the group, the greater the effect of extreme scores on a descriptive statistic such as the average. It should be noted also that any large disparity in the sample sizes between the "baseline year" of 1984-85 and the "trend year" of 1987-88 will lessen the reliability and validity of any conclusions that one might make based on a simple comparison of averages.

RESULTS OF THE TWO PUBLIC (AASCU) STUDIES, 1984-85 AND 1987-88

In the PUBLIC 1984-85 salary study in the above table, the reader may note that the discipline/major field of business economics was reported in 107 of the 216 public (AASCU) institutions. The average salary of the 823 faculty was $31,040. This average salary was approximately 6 percent (1.06) higher than the average salary of $29,234 for all 50,311 faculty in ALL MAJOR FIELDS in the 1984-85 public study.

In the PUBLIC 1987-88 salary study in the above table, the discipline/major field of business economics was reported in 120 of the same 216 public (AASCU) institutions. The average salary of the 915 faculty was $37,475. This average salary was approximately 8 percent (1.08) higher than the average salary of $34,581 for all 51,570 faculty in ALL MAJOR FIELDS in the 1987-88 public study.

The increase in average salaries for all faculty in business economics after three years in the public institutions studied was 20.7 percent ($37,475 minus $31,040 equals $6,435). The CPI of increased cost-of-living between October 1984 and October 1987 was 9.5 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 11.2 percent or an average of 3.7 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the public institutions studied was 18.3 percent ($34,581 minus $29,234 equals $5,347). In comparison to the discipline/major field of business economics (20.7%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by 2.4 percent (20.7% minus 18.3% equals 2.4%) less than faculty in the discipline/major field of business economics.

The reader may note that the faculty mix percentage in business economics is higher at the professor rank than at the assistant professor rank in both the public studies: 0.32 vs 0.29 (1984-85) and 0.36 vs 0.29 (1987-88),

respectively. The differences in faculty mix percentage at the ranks of professor and assistant professor in ALL MAJOR FIELDS for both public studies are as follows: 0.33 vs. 0.27 (1984-85) and 0.35 vs. 0.28 (1987-88), respectively. In other words ALL MAJOR FIELDS has a somewhat similar percentage of professors and assistant professors compared to business economics in both of the public studies.

Finally, the hiring rate of new assistant professors in business economics is high in the public studies: 4.0 percent (33/823) in 1984-85 vs. 3.8 percent (1,931/50,311) in ALL MAJOR FIELDS in 1984-85. Also, the hiring rate of new assistant professors in business economics in 1987-88 was 5.1 percent (47/915) vs. 4.4 percent (2,245/51,570) in ALL MAJOR FIELDS that same year. In other words with the hiring rate in the discipline/major field of business economics being higher than that for ALL MAJOR FIELDS in both of the public studies indicates that business economics continues to be a "growing" discipline nationally.

RESULTS OF THE TWO PRIVATE STUDIES, 1984-85 AND 1987-88

In the PRIVATE 1984-85 salary study in the above table, the reader may note that the discipline/major field of business economics was reported in 134 of the 266 private institutions. The average salary of the 661 faculty was $28,991. This average salary was approximately 3 percent (1.03) higher than the average salary of $29,769 for all 28,991 faculty in ALL MAJOR FIELDS in the 1983-84 private study.

In the PRIVATE 1987-88 salary study in the above table, the discipline/major field of business economics was reported in 142 of the same 266 private institutions. The average salary of the 684 faculty was $36,596. This average salary was approximately 4 percent (1.04) higher than the average salary of $35,269 for all 29,724 faculty in ALL MAJOR FIELDS in the 1987-88 private

study.

The increase in average salaries for all faculty in business economics after three years in the private institutions studied was 18.5 percent ($35,269 minus $29,769 equals $5,500). The CPI of increased cost-of-living between October 1984 and October 1987 was 9.5 percent. A more realistic increase, therefore, in average faculty salaries over the three-year time period is 9 percent or 3 percent each year above the cost-of-living.

The increase in average salaries for all faculty in ALL MAJOR FIELDS after three years in the private institutions studied was 18.3 percent ($34,581 minus $29,234 equals $5,347). In comparison to the discipline/major field of business economics (18.5%), therefore, the faculty in ALL MAJOR FIELDS increased their salaries by only .2 percent (18.5% minus 18.3% equals .2%) less than faculty in the discipline/major field of business economics.

In the discipline/major field of business economics, the reader may note that the faculty mix percentage at the professor rank is less than at the assistant professor rank in the private studies: 0.26 vs. 0.40 (1984-85), respectively; and 0.27 vs. 0.39 (1987-88), respectively. This is quite different from ALL MAJOR FIELDS for both private studies: 0.33 vs. 0.30 (1984-85), respectively; and 0.33 vs. 0.33 (1987-88), respectively. In other words ALL MAJOR FIELDS has a higher percentage of professors and a lower percentage of assistant professors compared to business economics in both private studies.

Finally, the reader may note that the hiring rate of new assistant professors in business economics in the private studies was greater than the hiring rate in ALL MAJOR FIELDS both in 1984-85, 6.4 percent (42/661) vs. 4.2 percent (1,224/28,991), respectively; and in 1987-88, 7.8 percent (53/684) vs. 4.5 percent (1,322/29,724), respectively. In other words the hiring rate in the discipline/major field of business economics exceeds ALL MAJOR FIELDS in both the private studies of 1984-85 and 1987-88.

CONCLUDING REMARKS

This article presented salary-trend information on the academic discipline/major field of business economics and compared that information with 44 other academic disciplines/major fields over a period of three years: the "baseline year" of 1984-85 through the "trend year" of 1987-88. Two studies, one for public (AASCU) institutions, and the other for private institutions were conducted for the baseline year and for the trend year--a total of four studies. A total of 3,083 faculty in the discipline/major field of business economics participated and were included in the overall total of 160,596 faculty in all 45 disciplines/major fields in all four studies. The same 216 public (AASCU) institutions and the same 266 private institutions in the United States participated in the baseline year and the trend year.

Although many interpolations and extrapolations of the data may be made, a few of the more important ones are as follows. First, the average faculty salary in the discipline/major field of business economics is currently (1987-88) some 8 and 4 percent above the overall average faculty salary of the other 44 disciplines/major fields for both the public and private studies, respectively. The average faculty salary for business economics in the public institutions was greater in comparison to that in the private institutions in 1984-85. The overall salary factor in the public institutions is now (1987-88) 8 percent higher than the overall average in comparison to that for the private institutions: 1.08 vs 1.04, respectively.

Second, the CPI of October 1987, in comparison to the CPI of October 1984, indicates that the faculty in business economics, in both the public and private institutions, received overall salary increases for three years above the cost-of-living. Business economics faculty salaries in both the public and private institutions exceeded faculty in ALL MAJOR FIELDS during this same

period as well. Business economics faculty in the private institutions have some catching up to do in salary in comparison to their colleagues in the public institutions.

Third, in the discipline/major field of business economics the assistant professor rank has a greater percentage compared to the full professor rank for the private studies and just the opposite is the case for the public studies. The full professor rank appears to be increasing more quickly in the public institutions. It seems that the same percentage of new assistant professors are being hired in the public institutions in comparison to the private institutions.

Now that a rather significant data base on individual faculty member salaries has been developed, it is anticipated that additional salary-trend studies will be effected in business economics, and in other disciplines/major fields, on an annual basis.

Richard D. Howe is the originator and director of the annual CUPA faculty salary studies. He is a professor of leadership and higher education, and history at Appalachian State University, Boone, North Carolina. Co-author Maryon Urquhart is a research analyst in the Office of Equal Opportunity Programs at Appalachian State University, Boone, North Carolina.
